SCEPTER CONDUIT & FITTINGS

SCEPTER Conduit & Fittings preferred for the LONG RUN

This manual provides the most comprehensive information about Scepter® PVC systems – from basic raw material to installation characteristics of the finished product. Written with the engineer, contractor and distributor in mind, it is based on laboratory test results and IPEX Electrical Inc.'s many years of field experience.

At IPEX, we have been extruding Scepter PVC conduit and molding Scepter PVC fittings since 1951. We formulate our own compounds, maintain strict quality control during production, and offer the most comprehensive line of electrical products throughout North America.

More important, our commitment to our customer extends beyond the sale. Quality control and

thorough jobsite field reports have earned Scepter a reputation for product quality and service excellence.

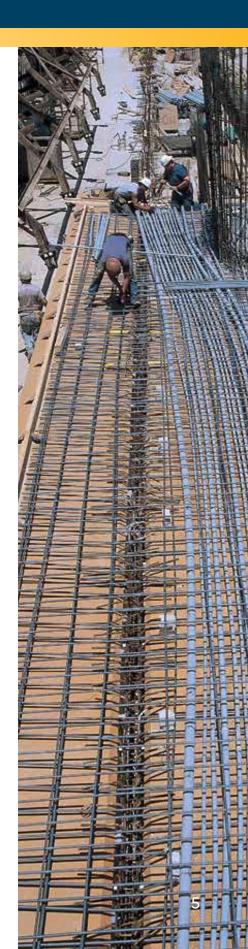

Engineers, electricians, contractors, specifiers and utilities have realized for many years the advantages of PVC. Whether exposed, concealed in walls, encased in concrete,

> products are preferred For The Long Run.

APPLICATIONS

- n UTILITIES
- n COMMUNICATIONS
- m AIRPORTS
- n CABLE
- m SUBWAYS
- n CAR WASHES
- PARKING GARAGES
- FISH PLANTS
- n STEEL MILLS
- n MARINAS
- **BRIDGES AND TUNNELS**
- n MINES
- STREET AND HIGHWAY LIGHTING
- RESIDENTIAL APPLICATIONS
- **WATER TREATMENT PLANTS**
- **SEWAGE TREATMENT PLANTS**
- PULP AND PAPER INDUSTRIES
- AGRICULTURAL, DAIRY, HOGS, CATTLE, CHICKEN, ETC.
- FOOD PROCESSING PLANTS

SCEPTER CONDUIT & FITTINGS

ADVANTAGES

LABOUR SAVINGS

Compared to metal, PVC products reduce labor on a typical installation by up to two-thirds. The reason? PVC is easy to work with. It can also be cut and joined without the usual pipe vices, cutters, threading equipment, and reamers associated with metal conduit.

SUNLIGHT RESISTANT

The 2006 Canadian electrical code rule 2-130 is intended to ensure that totally enclosed nonmetallic raceways are properly protected against adverse effects from direct exposure to UV rays. electrical nonmetallic raceways marked for such application are suitable for installation and use for direct exposure to rays of the sun. Scepter Rigid PVC conduit meets the criteria for sunlight resistance, is approved for the purpose, and is appropriately marked.

LIGHTWEIGHT CONDUIT

Scepter Rigid PVC Conduit is one-half the weight of aluminum and one-sixth the weight of steel. As a result, handling and installation are easier and faster, reducing labor costs.

EASY JOINING

Solvent cementing is all that is required, eliminating the need for power-threading machines, pipe vices and cutting equipment. A hacksaw or carpenter's saw is the only equipment required.

STRENGTH

Scepter Rigid PVC Conduit offers both high impact and high tensile strength, even in cold temperatures. Scepter Rigid PVC Conduit and fittings meet and exceed all CSA and UL standards.

SCEPTER RIGID PVC CONDUIT SCHEDULE 40

| Si | ize | CSA Imp | act Test | UL Impo | act Test |
|-------|--------|------------|-----------|------------|------------|
| in | mm | @ -29°F | @ -34°C | @ 72°F | @ 23°C |

| 1-1/4 | 32 | 8.9 ft.lbs | 12 joules | 120 ft.lbs | 163 joules |
| 1-1/2 | 40 | 8.9 ft.lbs | 12 joules | 150 ft.lbs | 204 joules |
| 2 | 50 | 8.9 ft.lbs | 12 joules | 190 ft.lbs | 258 joules |
| 2-1/2 | 65 | 8.9 ft.lbs | 12 joules | 210 ft.lbs | 285 joules |
| 3 - 6 | 75-150 | 8.9 ft.lbs | 12 joules | 220 ft.lbs | 298 joules |
| 8 | 75-150 | 8.9 ft.lbs | 12 joules | n/a | n/a |

Note:
CSA impacts are
carried out at
temperatures that are
well below freezing,
while UL impacts
are tested at room
temperature.

EASY WIRE PULLS

PVC's exceptionally smooth interior surface greatly reduces the amount of friction while pulling conductors/wires through long runs, even with 90° bends. A large pull-rope and wire-pulling lubricant should be used when pulling all conductors and wires.

NONCORRODING

PVC is immune to damage from naturally corrosive soil conditions, as well as electro-chemical and galvanic corrosion. This ensures lower maintenance costs and superior performance For The Long Run.

NONCONDUCTING

Scepter Rigid PVC Conduit pipe and fittings are nonsparking and nonconducting, thereby eliminating the most dangerous 'second point of contact' and 'phase to ground' faults. The use of a separate grounding conductor in a Scepter PVC conduit system gives a complete and positive ground for the whole system.

CHEMICAL RESISTANCE

One of the greatest benefits of PVC is its excellent chemical resistance. It resists attack by acids, alkalies, salt solutions, and many other types of chemicals. For more information on PVC and chemical resistance, refer to the IPEX Chemical Resistance Guide.

LONG LIFE

Scepter Rigid PVC Conduit pipe and fittings retain their original properties after years of exposure to heat and weather. In addition, resistance to fungi, bacterial action, rodents, termites and corrosive agents ensures a long, trouble-free life for PVC conduit installed indoors or outdoors.

FIRE RESISTANT

IPEX's proprietary PVC compound used to manufacture Scepter products is a self-extinguishing material and will not support combustion. Samples taken from an actual fire show the outer surface of the conduit was blistered and charred. The interior

| IPEX | Flame | Smoke | Fuel | |
|----------------|---------|-----------|--------------|--|
| Compound | Spread | Developed | Contribution | |
| 1/8" thickness | 10 - 20 | 225 - 270 | 0 | |
| 3/4" thickness | 10 - 20 | 300 - 390 | 0 | |

of the conduit, however, was unaffected. Additionally, the undamaged conductors were then removed and reinstalled in new conduit.

SCEPTER CONDUIT & FITTINGS

ADVANTAGES

FT-4 RATING

Scepter Rigid PVC conduit is certified to meet the requirements of FT-4 allowing its use in noncombustible construction per Section 3.1.5.20 of the National Building Code, which reads:

1.) Subject to the limits on the size of elements that penetrate fire separations as stated in Sentence 3.1.9.3.(2), within a fire compartment of a building required to be of noncombustible construction, totally enclosed nonmetallic raceways not more than 175mm in outside diameter, or of an equivalent rectangular area, are permitted to be used to enclose optical fibre cables and electrical wires and cables, provided the raceways exhibit a vertical char not more than 1.5m when tested in conformance with the Vertical Flame Test (FT - 4) Conduit or Tubing on Cable Tray in Clause 6.16 of CSA C22.2 No. 211.0, "General Requirements and Methods of Testing for Nonmetallic conduit."

CONCRETE TIGHT

Scepter Rigid PVC Conduit pipe and fittings are designed and engineered to be concrete tight in all weather conditions.

SUITABLE FOR DIRECT BURIAL

PVC is suitable for direct burial and requires no extra protection when installed in accordance with the Canadian Electrical Code, the National Electrical Code, and the local inspection authority guidelines. The usual care regarding trenches and backfilling should be respected.

ONE-SOURCE SPECIFICATION

IPEX offers a full range of PVC fittings and accessories. As a result, it is easy to specify a single source PVC system.

QUALITY CONTROL

In addition to IPEX's rigorous quality control testing, Scepter electrical products carry third-party certification by CSA, UL, and NRTL.

INSTALLATION

SUPPORT

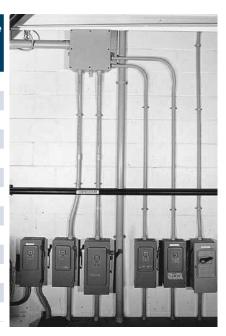

Due to PVC's lightweight, support spacing is different than that used with metal conduits. Supporting straps should NOT be firmly tightened, so that linear movement of the pipe is possible. The maximum allowable support spacing, per the Canadian Electrical Code (CEC) is as follows:

SUPPORT SPACING

Scepter Rigid PVC Conduit pipe and fittings are designed and engineered to be concrete tight in all weather conditions.

| Nominal Diam | | | ectrical Code ort Spacing |
|--------------|-----|-------|------------------------------|
| inches | mm | feet | metres |
| 1/2 | 12 | 2-1/2 | 0.75 |
| 3/4 | 20 | 2-1/2 | 0.75 |
| 1 | 25 | 2-1/2 | 0.75 |
| 1-1/4 | 32 | 4 | 1.20 |
| 1-1/2 | 40 | 4 | 1.20 |
| 2 | 50 | 5 | 1.50 |
| 2-1/2 | 65 | 6 | 1.80 |
| 3 | 75 | 6 | 1.80 |
| 3-1/2 | 90 | 7 | 2.10 |
| 4 | 100 | 7 | 2.10 |
| 5 | 125 | 7 | 2.10 |
| 6 | 150 | 8 | 2.50 |
| 8 | 200 | 8 | 2.50 |
| | | | |

MAX OPERATING TEMPERATURE

The Canadian Electrical Code (CEC) allows the use of Scepter Rigid PVC Conduit up to a maximum ambient temperature of 167°F (75°C).

CUTTING

Scepter Rigid PVC Conduit can be easily cut on the jobsite by using a hacksaw, carpenter's saw or PVC conduit cutters. For larger sizes of conduit, the use of a mitre box is also recommended to ensure a square cut.

SCEPTER CONDUIT & FITTINGS

INSTALLATION

SOLVENT CEMENTING

After cutting Scepter Rigid PVC Conduit, remove all sharp edges or burrs from the inside of the conduit with a knife. Thoroughly clean the end of the pipe and inside the fitting with a rag or pipe cleaner. Check the pipe and fitting for a dry fit before cementing. Apply a generous amount of IPEX solvent cement to both surfaces; slide together and give a quarter turn to ensure the solvent is spread evenly on the material. Hold together for a few seconds until the joint is made.

Usually the solvent-cemented joint will be strong enough to install immediately. However, in climates with low temperatures or areas with high humidity, extra time may be required before moving the pipe for permanent installation. Solvent-cemented joints appear to "set up" instantly, but will take up to 24 hours to cure properly. After this time, the solvent-cemented joint has completely cured and is waterproof. For extreme cold weather installations, the use of IPEX PVC Primer is recommended. Normal installation temperatures are between 40°F (4°C) and 110°F (43°C), however, high strength joints have been made at temperatures as low as -15°F (-26°C) with quality cements. In these extreme conditions the cement must be kept warm to prevent excessive thickening and gelation in cold weather.

IPEX cements and primers are available in half-pint (250ml), pint (500ml), quart (1-litre) and gallon (4-litre) containers. The shelf life of conduit cement and primer is 3 years from the date of manufacture. The date code stamped on the bottom of the can is the date of manufacture, not the expiry date. Always verify that the cement is within this 3 year time frame before using.

BENDING

PVC is a thermoplastic material that, when heated, becomes soft and pliable. As a result, its shape can be altered.

A flameless heat source is recommended to heat the pipe. AN OPEN FLAME SHOULD NOT BE USED. An electric unit or an infra-red propane unit is recommended for heating the pipe.

The necessary temperature for bending Scepter Rigid PVC pipe is 260°F (127°C). The pipe must be heated evenly over an area approximately ten times the diameter of the pipe before any attempt at bending is made. Bending the pipe when it has not been thoroughly heated will cause the pipe to "kink." With proper care and a little practice, the bend will form easily.

Cooling the pipe with cold air or water will cause "spring back." Allow a few extra degrees of overbending to compensate for this phenomenom. The maximum bending radius shall be six times the internal diameter according to the Canadian Electrical Code and the National Electrical Code.

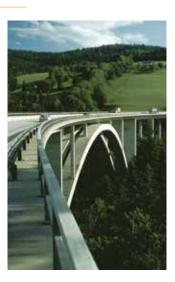

EXPANSION AND CONTRACTION

USING EXPANSION JOINTS

It is equally important to know when to install an expansion joint as it is to know how to correctly install the expansion joint. Expansion joints are required when the temperature change is greater than 25°F (14°C). Scepter Rigid PVC Conduit has a coefficient of linear expansion of 3.6 x 10-4 in./ft./°F (.054mm/m/°C). Generally, a 100 ft. (30.48m) run of PVC conduit will undergo a change in length of 3.6 inches (91.44mm) for every $100^{\circ}F$ ($56^{\circ}C$) temperature change.

For conduit installed indoors, the range of expansion and contraction can be calculated using the maximum air temperature plus the heat contributed by the conductors inside the conduit and the minimum air temperature expected. Expansion joints are not required indoors unless there are widely varying temperatures such as the attic of a building.

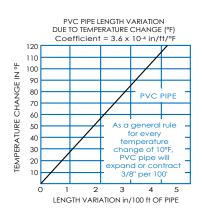

Conduit installed outdoors, exposed to direct sunlight, will be considerably hotter than the air temperature. As a guideline in this case, add 27°F (15°C) to the temperature change. Expansion joints should be installed to allow for all anticipated temperature changes.

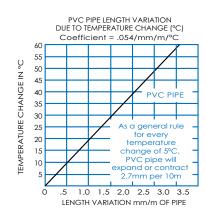

EXPANSION FORMULA

By using the following formulas and the charts below, the total expected expansion in a run can be easily determined:or

°F Total Expansion (in.) = length of run (ft.) x temperature change (°F) x 0.00036

°C Total Expansion (mm) = length of run (m) x temperature change (°C) x 0.054

SCEPTER CONDUIT & FITTINGS

EXPANSION AND CONTRACTION

NUMBER OF EXPANSION JOINTS REQUIRED

Use the following equation to determine the number of expansion joints needed for a Scepter Rigid PVC Conduit installation:

Number of joints = total expansion (mm or in)

E = Expansion joint travel length 101.6mm (4") or 203.2mm (8") depending on diameter.

Always round up to the next whole number.

SETTING THE PISTON OPENING

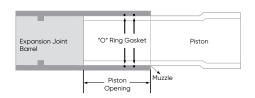

The expansion joint must be installed to allow for expansion and contraction of the conduit run. On a cold day, if an expansion joint is installed completely closed with the piston bottomed, there is no room for expansion when the conduit is warmed. If it is installed open to the maximum on a hot day, the expansion joint will pull apart when cooled.

The correct piston opening for any installation condition can be easily determined using the formula below.

Piston setting = compressed length + | max. temperature - installation temperature | x E | max. temperature - min. temperature | x E | max. temp

Formula can be used for both metric and imperial measurements.

| | ze | | ed Length | Trav | · |
|------|-------|-------|-----------|-------|------|
| (mm) | (in) | (mm) | (in) | (mm) | (in) |
| 13 | 1/2 | 203.2 | 8.00 | 101.6 | 4 |
| 20 | 3/4 | 203.2 | 8.00 | 101.6 | 4 |
| 25 | 1 | 215.9 | 8.50 | 101.6 | 4 |
| 32 | 1-1/4 | 228.6 | 9.00 | 101.6 | 4 |
| 38 | 1-1/2 | 228.6 | 9.00 | 101.6 | 4 |
| 51 | 2 | 235.0 | 9.25 | 101.6 | 4 |
| 64 | 2-1/2 | 362.0 | 14.25 | 203.2 | 8 |
| 76 | 3 | 362.0 | 14.25 | 203.2 | 8 |
| 89 | 3-1/2 | 378.5 | 14.90 | 203.2 | 8 |
| 102 | 4 | 378.5 | 14.90 | 203.2 | 8 |
| 127 | 5 | 660.4 | 26.00 | 203.2 | 8 |
| 152 | 6 | 660.4 | 26.00 | 203.2 | 8 |

INSTALLATION OF EXPANSION JOINTS

USING EXPANSION JOINTS

Proper functioning of an expansion joint depends on three procedures:

- 1. The correct placement of the expansion joint.
- 2. The proper installation of Scepter Rigid PVC Conduit and the expansion joint.
- 3. The proper placement and fastening of support straps.

If only one expansion joint is needed between two boxes, the barrel of the joint should be rigidly fastened close to the first box. Scepter Rigid PVC Conduit should then be loosely supported with straps, allowing the conduit to move freely as it expands and contracts.

TWO EXPANSION JOINTS - FIGURE 2

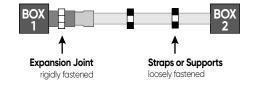

If two expansion joints are needed, the joints should be firmly fastened back to back at the centre of the run. Scepter Rigid PVC Conduit should be loosely supported with straps, allowing the conduit to move freely as it expands and contracts.

TWO EXPANSION JOINTS (ALTERNATIVE) - FIGURE 3

Alternatively, the centre of the run and the two expansion joints (located at the boxes) should be rigidly fastened. All other support straps should be loosely fastened.

THREE OR MORE EXPANSION JOINTS - FIGURE 4

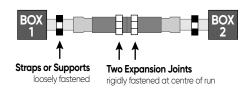

If more than two joints are needed in a very long run, they should be put in a series, one after the other. Each barrel must be rigidly fastened while conduit is loosely supported with straps allowing

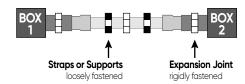

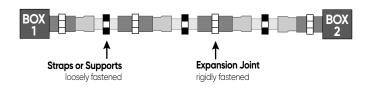

Legend

Anchor

Guide or Hanger

the conduit to move freely as it expands and contracts. When installed in a series, each section acts independently of the other. Spacing of conduit supports must be in accordance with Section 12-1114 of the Canadian Electrical Code or NEC Article 347-8. (See Table on Support Spacing)

SCEPTER CONDUIT & FITTINGS

INSTALLATION OF EXPANSION JOINTS

INSTALLATION RECOMMENDATIONS

- Expansion joints should be mounted so the piston can travel in a straight line in the barrel. If the alignment is not straight, the piston will bind, preventing the joint from functioning correctly.
- The expansion joint barrel should be clamped tight, but the conduit mounted loose enough in its hangers to allow for movement as it expands and contracts.
- Scepter nonmetallic straps are correctly sized and designed for proper support, and must be used to secure the conduit.
- When expansion joints are used in a vertical position, the piston should be mounted in a
 downward position so dirt cannot deposit between the barrel and piston at the muzzle of the
 expansion joints.

STANDARDS AND SAMPLE SPECIFICATIONS

LISTINGS

Scepter Rigid PVC Conduit is certified to the following:

APPROVALS

Canadian Electrical Code, Part 1. Rules 12-1100 - 12-1122

SAMPLE SPECIFICATIONS

All wiring shall be installed in Rigid PVC conduit and secured to PVC boxes and cabinets by means of proper fittings. All boxes, access fittings and covers shall be furnished with threaded brass inserts, brass screws and PVC gaskets.

Rigid PVC fittings and junction boxes shall be used for all outlets, pull boxes and junction points. All PVC junction boxes shall be NEMA 1, 2, 3, 4, 4X, 6P, 12 and 13 rated and UL Listed for wet locations.

Exposed conduit shall be securely held in place by suitable hangers or straps with the maximum spacing of points for supports not exceeding those specified in the CEC or NEC. Except when embedded in concrete, rigid conduit pipe shall not be clamped tightly. It shall be supported in such a manner as to permit adequate linear movement, allowing for expansion and contraction of conduit due to temperature change. Where a temperature change exceeding 25°F (14°C) is anticipated, rigid PVC expansion joints shall be installed in accordance with the manufacturer's recommendations.

Proper care shall be taken when field bending, to maintain the internal diameter and wall thickness of the conduit.

The contractor shall furnish and install Scepter Rigid PVC conduit pipe and fittings made by IPEX. Where the engineer's specifications indicate Scepter products or equivalent, the equivalent shall be CSA certified and accepted by the Canadian Electrical Code. Due to broad manufacturing tolerances, all pipe and fitting products shall be of the same manufacturer.

NONMETALLIC THREADED STRAIN RELIEF CONNECTORS

The Strain Relief Connectors come with everything needed to make a cable connection. The package includes a connector body, cap, and grommets that cover a wide range of cable types and sizes to provide added flexibility on the jobsite.

These specially designed grommets have collapsing teeth and an inverting membrane which secures cables and provides exceptional strain relief at termination points. The grommets are made from a specially formulated TPE material that provides exceptional grip and durability.

CONDUIT CEMENTS & PRIMERS

IPEX Electrical 100 Conduit Cements are low VOC. Our reduced emission cements have been tested to meet the requirements of SCAQMD Rule 1168, Test Method 316A (South Coast Air Quality Management District).

- · Low VOC Solvent Cement is LEED (Leadership in Energy and Environmental Design) compliant
- PVC is recyclable and can be reground into new product
- VOC emissions are less than 510 grams per litre for PVC Solvent Cement

The Scepter App allows you to calculate the number of joints required and the recommended support spacing for runs of conduit in a matter of seconds.

The calculation process is simple...

ACCESS FITTINGS

No other manufacturer offers such an extensive range of access fitting sizes (1/2" to 4") or hub configurations (LL, T, TB, LB, E, C, LR). CSA certified and UL listed, Scepter access fittings come fully factory assembled so parts cannot be misplaced during shipping and handling.

Manufactured with threaded brass screws and inserts, and flexible PVC gaskets, Scepter access covers can be removed as often as needed without wear or cracking.

All access fittings are CSA certified and UL listed for wet locations.

Access Fittings are supplied with threaded brass inserts, combination brass head screws, PVC gasket and cover.

"TWO IN ONE" PULL ELBOW

The "two in one" access pull elbow reduces inventory costs (3/4") hub fitting supplied with $3/4" \times 1/2"$ reducers). This pull elbow is approved for wet locations and provides for easy wire pulling.

SCEPTER PVC ROUND FLOOR BOX

Suitable for slab-on-grade, below grade and wood floor construction, Scepter PVC round floor boxes and accessories enable contractors to collectively run in-floor power, data and communications wiring to a single box for significant savings in time and materials.

Installation is quick and simple, with our nonmetallic floor box and covers, saving both time and money over similar metallic assemblies.

Scepter's floor box and duplex receptacle covers are constructed from high impact, noncorroding and nonconducting PVC. The flush-mount covers are available in custom colors and are shipped with a levelling ring complete with a grounding clip. Metal cover adapter kits are also available, allowing you to adapt to metal floor plates. Our 6" deep floor box allows flexibility for various concrete floor pours, while our 4-3/4" width offers easy access and ample wire room. The box comes complete with 2 - 1" and 2 - 3/4" hub openings. All boxes are shipped complete with reducer plugs for added versatility.

Complete technical information available at www.ipexelectrical.com - Nonmetallic Floor Box & Accessories Technical Manual.

BRASS AND NICKEL COVER PLATES

These cover plates help to protect enclosed power data and communications wiring from daily environmental floor conditions such as mopping (UL scrub water tested) and foot traffic (UL approved for cover loading).

The covers feature a light lacquer finish for extra strength and durability in high traffic areas and include a rubber gasket and aluminum backing plate to create a water-tight seal. The flush mount cover plates should be installed to the floor box using the LRA-U.

The EASIEST Junction Box you'll EVER use

The frustrations are gone – no more worries about positioning a gasket or over-tightening a cover screw, and no more loose parts to misplace before installation. We've added features to make the installation of a junction box faster and easier; whether locating and aligning conduit entry holes, easily mounting the box to a wall or pole or installing a cover with only one hand, you will appreciate the design features.

APPLICATIONS

- CORROSIVE ENVIRONMENTS
- MARINE & CAR WASHES
- WASH DOWN
- AGRICULTURAL
- WASTE-WATER TREATMENT FACILITIES

ADVANTAGES

ZERO FOOTPRINT

Design allows for installation in corners and immediately adjacent to other products. There is easy access to all mounting feet and fasteners.

INSTALLING OVERHEAD

Integral fasteners allow for easy overhead positioning and securing.

MOUNTING IN A COVER

Pilot lights, control switches and other devices are easily mounted. The Cover is free and clear of supporting ribs, and has a uniform thickness.

ADDED SECURITY

Sizes 6" and larger feature a lock-out option. Tie-wrap, tamper resistant bolt or padlock will restrict access to the box.

MORE INTERIOR VOLUME

Increased space from wire pulling and for ease of bend radius. The increased cubic inch volume allows for more flexibility

SCEPTER JBOX

FEATURES & BENEFITS

FASTENERS

- Close by hand tool assist to open
- 100% non-metallic corrosion resistant material
- No loose hardware for easy installation

LOCK-OUT OPTION

- Available on sizes 6" to 16"
- Use a tie-wrap, bolt or padlock for added security

INTEGRATED GASKET

- Injection molded gasket permanently fixed to the cover -no installation required
- Proprietary gasket material creates a 6P rated enclosure FLAT COVER
- No ribs offers a flat, smooth surface for mounting of devices or labels
- No engravings

BACK PANEL

- Designed to fit sizes 6" and 16"
- Made of 14 gauge carbon steel
- White epoxy powder-coated finish
- Easy to cut and drill to mount devices

GRIDLINES

- Easy reference for drilling knockouts
- Makes conduit alignment a snap
- Indicates a "drill zone"

MOUNTING FEET

- Molded –no loose parts to assemble
- Located on corners out of the way of conduit connections
- Flush with the back of the box for close surface mounting
- Integrated design of mounting feet offers improved strength

POLE MOUNTING KIT

- One kit fits 4" to 16"
- Supplied as a complete kit
- Works with wood, concrete, steel and composite poles
- Installs on round, square &octagonal poles up to 15"diameter

PERFORMANCE RATINGS

MAXIMUM TEMPERATURE RANGE: Maximum ambient temperatures to 122°F (50°C) as per the NEC

RECOMMENDED OPERATING TEMPERATURE: -40°F to 122°F (-40°C to 50°C)

UV AND WATER EXPOSURE RATING: UL 746C approved for exposure to UV and water

FLAME & SMOKE RATING: UL 94V-0 (UL94 Vertical Flame Test)

NEMA ENCLOSURE RATINGS: The Scepter JBox is NEMA Rated 1, 2, 3R, 4, 4X, 6*, 6P*, 12, 13

(*Applies only to sizes 4" to 12" non-hinged covers)

INDUSTRIAL CONTROL PANELS UL 508A: Suitable to be used as an enclosure per section 18 of UL 508A

CONDUCTORS: Suitable for use with 90°C Rated Conductors

NEMA RATING

SCEPTER JBOX HINGED COVER

Tested to perform in industrial environments, the Scepter JBox Hinged Cover junction box has added features to make this the easiest box to use – no matter the situation.

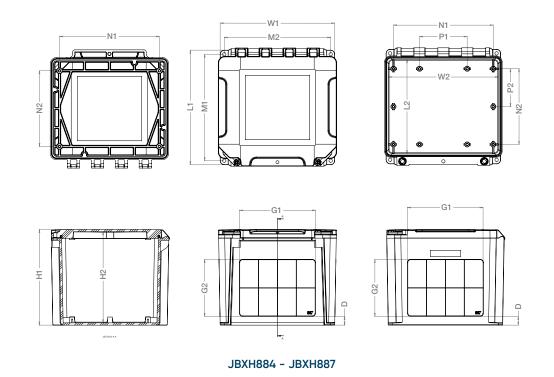

The Hinged Cover opens more than 200° for complete and easy access to control devices and instruments and is designed to work with your existing PVC conduit runs. The Scepter JBox Hinged Cover is NEMA 3R and 4X rated, ideally suited for indoor and outdoor use and in washdown environments. It is 100% non-metallic and includes all the features that users have come to appreciate in the Scepter JBox.

EPR KITS FOR CONDUIT REPAIR

REPAIRS CONDUIT as easy as 1-2-3

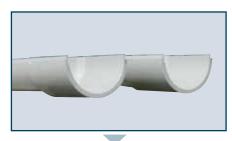

These clever and innovative conduit repair kits from IPEX are the first total repair systems for broken and damaged PVC conduit.

They offer fast and easy repairs for damaged conduit caused by actions such as earth excavation, horizontal and core drilling.

EPR Kits are manufactured of high-impact and non-conductive PVC, ensuring a life long quality repair for your system. All sizes are 24 inches in length.

With unique interlocking joints, the EPR Kits' two half shell bell by bell pieces simply close around the installed wire and cable. Using standard PVC solvent cement, EPR Kits are quickly and easily assembled and connected, restoring the conduit to its original form. And, unlike other conduit repair systems, EPR Kits are capable of repairing various lengths and types of pipe quickly and accurately, saving you time and money.

STEPS 1-2-3

ADVANTAGES

RESTORES structural integrity of conduit system

COST SAVINGS with fast and easy installation

COMPATIBILITY – inside diameter of bell equals outside diameter of pipe to create a bell and spigot connection

SPECIAL INTERLOCKING JOINTS provide water-tight seal

PACKAGING includes easy to follow instruction sheet

IDEAL FOR THE REPAIR OF RIGID PVC CONDUIT in electrical,

telecommunication, utility and CATV applications

About IPEX by Aliaxis

As leading suppliers of thermoplastic piping systems, IPEX by Aliaxis provides our customers with some of the world's largest and most comprehensive product lines. All IPEX by Aliaxis products are backed by more than 50 years of experience. With state-of-the-art manufacturing facilities and distribution centers across North America, we have earned a reputation for product innovation, quality, end-user focus and performance.

Markets served by IPEX by Aliaxis products are:

- · Electrical systems
- Telecommunications and utility piping systems
- PVC, CPVC, PP, PVDF, PE, ABS, and PEX pipe and fittings
- · Industrial process piping systems
- Municipal pressure and gravity piping systems
- Plumbing and mechanical piping systems
- · Electrofusion systems for gas and water
- Industrial, plumbing and electrical cements
- Irrigation systems

Product is manufactured by IPEX Electrical Inc.
