

IPEX CycleTough® Repair Couplings

IPEX CycleTough® Repair Couplings, molded in sizes 2" to 8", are used to repair cut or broken pipe and are expertly designed to better accommodate installations with large gaps or uneven cuts.

CycleTough® IPS pressure fittings are used in irrigation systems and are designed to serve the demanding, recurring pressure surges associated with these applications. Designed for IPS pipe, these fittings are engineered to meet long-term pressures of 200 psi.

CycleTough IPS pressure fittings can be used for irrigation, potable water supply lines, industrial process lines, stormwater disposal, water transmission, sewage force mains and golf course applications.

Features and Benefits:

- Square bell end design with additional contact surface area for mallets or hammers
- Longer pattern to better accommodate difficult installations
- Bottle-tight joints to withstand higher pressures
- High tolerance to water hammer and surges, resulting in lower system pressures
- Easy installation and quick adjustments
