

System 1738[®] Access Tee

Periodic flue gas monitoring is a fast growing requirement for many gas-fired heating appliances. It is common today to conduct such monitoring by inserting special electronic probes into the vent line during actual operation. Drilling a small hole into the vent line and plugging the hole afterwards compromises the integrity of the vent system and creates an opportunity for carbon monoxide to escape the vent which jeopardizes public safety.

To help address this field issue, IPEX is pleased to introduce our new Molded Access Tee to allow a safe inline access point for flue monitoring using fully certified System 1738[®] components.

Size Inches	Product Code
2	397511
3	397512
4	397513

Features and Benefits:

- May be installed in new installations or added to existing lines when monitoring is required
- May be used on vent lines in diameters (2", 3" and 4")
- Certified for use only on IPEX System 1738 flue gas vent lines
- Molded tee design with IPEX System 1738 removable 1/2" MPT plug
- More compact and robust design
