

Universal Adapters for Genesis F3

NEW PRODUCT SHOWCASE

IPEX Introduces Universal Adapters for the Genesis F3™

Switching the connectors on your electrofusion processor leads can be an annoyance in the field. While Frialen® Safety Fittings with their 4.0mm pins are the safest and most reliable electrofusion fittings available, there are occasions when installers are required to use less advanced electrofusion fittings with a different 4.7mm pin configuration. In the past, an installer would need to use an adapter to switch the Genesis F3 leads from the 4.0 pin on a Frialen or Innogaz fitting to the 4.7 mm pin on other products.

The new Universal Adapter from IPEX fits both pin sizes, eliminating the need to switch adaptors in the field.

4.0mm

4.7mm

FEATURES & BENEFITS

- Fits both 4.0mm and 4.7mm fitting pins without changing adapters. Automatically adjusts to either size.
- Automatically compensates for wear as the adapter ages. The ID of the adapter can wear 0.015" without affecting the fit on the fitting.
- Clamping force is maintained by four O-rings that can be field replaced if they ever get damaged.
- Adequate clamping force can be achieved with only two O-rings in an emergency. However it is recommended that four O-rings are present at all other times.

LIMITATIONS

- The Universal adapter cannot be used in ID resistor mode (only barcode or manual mode fusions may be performed)
- The Universal adapter cannot be used with older 3.0mm fittings

Product Number	Description
328269	4.0 and 4.7 mm Universal Adapter for Genesis F3 (1 adapter)
