

# Electrical Case Study

## The Revitalization of Bronte Village proudly supported by IPEX Electrical Inc.

### PRODUCT

Kwikon® ENT to AC90 adapters

- No need to glue the FA adapter anymore and use a 3/4" to 1/2" threaded reducer
- Less inventory we have to buy, carry and stock

### MUNICIPALITY

Bronte Village in Oakville, ON

### CONTRACTOR

Nortown Electrical Contractors

### OAKVILLE'S VILLAGE BY THE LAKE

In the spring of 2019, construction began on two new towers at Bronte Village in Oakville, Ontario. The 10- and 14-storey towers include 487 housing units, five retail spaces, and two guest suites.

Though still in construction, these sites proudly support IPEX Electrical, using products that include hundreds of thousands of feet in various sizes of Cor-Line® ENT; thousands of Kwikon® fittings, slab boxes, and electrical boxes; and several thousand of the new Kwikon adapters for connecting ENT to AC90.

The new Kwikon adapters have become the preferred standard for Michael Kenfelja of Nortown Electrical Contractors because there is "less inventory we have to buy, carry and stock with the new Kwikon® ENT to AC90 adapters."

Used in high-rise construction, this fitting connects Cor-Line 3/4" ENT and a 1/2" Female Adapter to make a connection to armoured cable. The addition of this unique product will

"There is no need to glue the FA adapter anymore. It's a very convenient & well thought out fitting that saves us time and as we all know time is money!"

save contractors valuable time and money from having to field assemble the combination of fittings or cement the female adapter and reducer bushing to Cor-Line ENT.

AC90 (BX) cable is used for open and concealed wiring in dry locations, where the nonmetallic raceways (Cor-Line ENT) are not allowed to be exposed due to flame and smoke requirements of the CEC. Michael goes on to say, "There is no need to glue the FA adapter anymore and use a 3/4" to 1/2" threaded reducer, which is cheaper and faster for us as well. It's a very convenient and well-thought-out fitting that saves us time, and as we all know, time is money!"

Many key factors led to the decision to choose IPEX Electrical products.

"I've been working in the electrical field for over 30 years and our IPEX representative has always been available to answer any questions or concerns".

Michael Kenfelja  
Nortown Electrical Contractors

Other factors led Michael to choose IPEX products for this job, including, "the high-quality products in addition to the excellent after-sale and on-site support."

Michael went on to say that he appreciates how "IPEX is always adapting to customer requests and needs or suggestions for new products that save us time and money".

Although there have been a few unexpected delays in labour and production due to the current worldwide pandemic, the new Bronte Village project is expected to be completed by May 2021.
